

Which medical treatment is best?

JISEIKAI was established in 1988-starting first as Dental Clinic Fukuoka and then later as Medical Corporation JISEIKAI in 1993. We have grown continuously since 1988, and the driving force behind this growth has been our consistent efforts to provide medical care from the standpoint of our patients.

Progressing from 'Cure' to 'Care' and 'Beauty'

Our Goal in the 21st Century

Which Medical Treatment is Best?

Recent years have seen increasing emphasis placed on evidence-based medicine (EBM), and the importance of relating medical treatment to scientific data is now universally accepted. When dealing with the preciousness of human life, however, there are no 'absolutes,' and thus our mission is to provide warm-hearted and patient-friendly medical treatment. At JISEIKAI, we always strive to realize patient-based care and are acutely aware of the need to provide care from the standpoint of the patient. To this end, we always obtain informed consent from our patients, and we also contribute to the health of the community by providing dental care to bedridden elderly and handicapped individuals, in addition to providing on-site multiphasic dental screening in the workplace. The medical professionals at JISEIKAI are constantly undergoing advanced training in an effort to provide the highest level of care to patients.

Today, by combining state-of-the-art techniques with patient relationships built upon trust, JISEIKAI has shifted its focus from 'cure' to 'care' so that we, as oral care professionals, can actively prevent disease by promoting the health of our patients. We are always striving to achieve this goal.

Now that the 21st century has arrived, it is time to reexamine the basis of medicine and rethink the role of medical professionals.

Further to our efforts of providing compassionate and sensitive treatment based on trust, we utilize a mobile clinic to provide care to bedridden elderly and handicapped patients, thus helping to provide them with rehabilitation

for eating and swallowing. Also, we have channeled our efforts into providing care with the emphasis on “prevention” based on the concept of "from cure to care" by performing multiphasic dental screening. Also, before carrying out any procedure, we thoroughly explain the details and cost of any dental procedures in the course of obtaining informed consent. This is the starting point of our patient-based care. In the future, we aim to become a community-support private clinic by making effective use of our newly-opened prevention center and implant center. We plan to enrich and improve our equipment and establish a system in which high-quality care can be provided to residents of various communities. By supporting the oral care of community residents and increasing the circle of trust, we hope to earn the trust and respect of our patients and maintain their goodwill for a long time to come.
